Doc Type:Working Group DocumentTitle:Revised proposal to encode heterodox chess symbols in the UCSSource:Garth Wallace and Michael EversonStatus:Individual ContributionAction:For consideration by JTC1/SC2/WG2 and UTCDate:2017-03-28Replaces:L2/16-293

**0. Introduction** The UCS contains symbols for the game of chess in the Miscellaneous Symbols block. These are used in figurine notation, a common variation on algebraic notation in which pieces are represented in running text using the same symbols as are found in diagrams. While the symbols already encoded in Unicode are sufficient for use in the orthodox game, they are insufficient for many chess problems and variant games, which make use of extended sets.

**1. Fairy chess problems** The presentation of chess positions as puzzles to be solved predates the existence of the modern game, dating back to the *mans\bar{u}b\bar{a}t* composed for *shatranj*, the Muslim predecessor of chess. In modern chess problems, a position is provided along with a stipulation such as "white to move and mate in two", and the solver is tasked with finding a move (called a "key") that satisfies the stipulation regardless of a hypothetical opposing player's moves in response. These solutions are given in the same notation as lines of play in over-the-board games: typically algebraic notation, using abbreviations for the names of pieces, or figurine algebraic notation.

Problem composers have not limited themselves to the materials of the conventional game, but have experimented with different board sizes and geometries, altered rules, goals other than checkmate, and different pieces. Problems that diverge from the standard game comprise a genre called "fairy chess". Thomas Rayner Dawson, known as the "father of fairy chess", popularized the genre in the early 20th century. He invented many pieces and conditions, and was the editor of the *Fairy Chess Review*, an offshoot of the British chess problem magazine *The Problemist*.

Fairy chess problems that differ from orthodox chess only in rule set, stipulation, or board do not require any symbols not also used for orthodox chess. For example, a cylindrical board is shown as a standard square but the leftmost and rightmost files are treated as adjacent; "Circe chess" differs only in what happens when pieces are captured. Unconventional pieces are another story, as there must be some way of representing additional types of pieces alongside the standard ones.

Most fairy pieces are conventionally represented by rotating the standard chess piece symbols. In the days of hot metal typography, this enabled composers and publishers to use easily available chess typefaces for fairy problems, without the added hassle and expense of designing and cutting new type for each and every new kind of piece. Unlike the standard upright symbols, which always correspond to the orthodox pieces, there is no strict one-to-one correspondence between rotated symbols and particular piece types: the number of fairy pieces in use is uncountable, and the number of possible pieces is infinite. Instead, rotated symbols are assigned to pieces as needed, and the composer has wide latitude in

choosing which ones they feel are appropriate, with only a few very common ones fixed by convention: the grasshopper is almost always  $\mathbb{A}$ , and the nightrider  $\mathbb{G}$ . Beyond that, the particular assignments are usually motivated by perceived similarity, e.g. a piece that leaps obliquely would probably use one of the rotated knights, while one that moves mostly diagonally might use a rotated bishop.

All six piece symbols can be found in 180°, clockwise 90°, and counter-clockwise 90° rotations. Less commonly—since there are a great many possible pieces moving in oblique directions and composers sometimes wish to use more than four of them—the knight symbol can also be found in the four intermediate, 45° increment rotations. While intermediate rotations of the other piece symbols are theoretically possible, and can occasionally be found in fonts and image sets, only the intermediate rotated knights are in regular use.

**2. Neutral pieces** are among Dawson's popular innovations. These are pieces that do not belong exclusively to either white or black but may be moved or captured by both. In older publications, these were represented by rotated white symbols, but current practice is to use symbols that are white on one side and black on the other, which has the advantages of greater clarity and flexibility.

All four cardinal rotations of the six piece symbol shapes, including the king, may be found in this halffilled form. Upright and 180° turned symbols are usually split across the vertical center line into left and right sides; 90° rotated pieces are usually split across the horizontal center line. Which half is white and which black depends on the font and is not used to distinguish pieces. Knights in intermediate rotations may also be neutral; these may simply be 45 or 135 rotations from the upright neutral forms, or they may be split across the vertical or horizontal center line.

**3. Geometric shapes** are sometimes used to represent pieces that do not behave similarly to conventional pieces, for example white or black circles used for the orphan, which moves like any piece attacking it. In general, the range of shapes used for this purpose is already well covered by the UCS. The font here is the STIX Maths font, taken for its standard size of many symbols.

 $\begin{array}{l} U+25CB \bigcirc \text{ white circle} \\ U+25CF \textcircled{0} \text{ black circle} \\ U+25D0 \textcircled{0} \text{ circle with left half black or } U+25D1 \textcircled{0} \text{ circle with right half black} \\ U+25C7 \diamondsuit \text{ white diamond} \\ U+25C6 \textcircled{0} \text{ black diamond} \\ U+2B16 \textcircled{0} \text{ diamond with left half black or } U+2B17 \textcircled{0} \text{ diamond with right half black} \\ U+2606 \Leftrightarrow \text{ white star} \\ U+2605 \bigstar \text{ black star and occasionally} \\ U+25EF \bigcirc \text{ large circle or } U+2B24 \textcircled{0} \text{ black large circle} \end{array}$ 

Occasionally the neutral form of the five-pointed star is found, though in general the star is already vanishingly rare as a chess symbol. The character 2BEA  $\star$  STAR WITH LEFT HALF BLACK under ballot would suit this purpose.

**4. The equihopper**, invented in the early 20th century by G. Leathem, is a piece that slides in a straight line until it reaches another piece, hops over that piece, and continues to slide in the same direction until the distance from the hurdle to its destination is equal to the distance from its starting square to the hurdle; if either slide is impeded, the move is not allowed. It is an exception to the rule that fairy pieces are represented by rotated standard piece symbols, as it receives a distinct symbol of its own:  $\bowtie$ . This symbol may have originally been a simple arrangement of geometric shapes probably meant to evoke its move: a slender vertical rectangle flanked by two triangles pointing inward. Later fonts have added

details to make it harmonize with the standard Staunton-style piece symbols (such as adding rectangular "bases" to either end, or "collar" lines), to the point where its basic shape is sometimes obscured.

The equihopper has its own variations, such as the non-stop equihopper (also known as the French equihopper or equileaper), which leaps over all pieces on the line and not just the hurdle in the center. These may also use the same symbol. When multiple types of equihoppers are present, a 90° rotated equihopper symbol is used to distinguish between them. Since the equihopper symbol has 180° rotational symmetry, there is no 180° turned equihopper symbol and no distinction between clockwise and counterclockwise rotations. Equihoppers in intermediate rotations are not attested. The rotated equihopper in some fonts bears a slight resemblance to an hourglass, but does not depict one, and neither U+231B  $\Xi$  HOURGLASS nor U+23F3  $\Xi$  HOURGLASS WITH FLOWING SAND would be acceptable substitutes. The mathematical symbols U+29D6  $\Xi$  WHITE HOURGLASS and U+29D7  $\Xi$  BLACK HOURGLASS are similar to the simplest form of the rotated equihopper, but lack the central rectangle, and the more ornate versions of the rotated equihopper symbol would likely not be acceptable forms of those symbols for use in mathematics.

The symbol for a neutral equihopper is half-white and half-black like the other neutral pieces. In some fonts, the neutral basic equihopper is split across the horizontal center line while the rotated equihopper is split across the vertical, which is the opposite arrangement from the standard symbols.

5. The knighted compounds are pieces that have been reinvented several times in the history of chess, and consequently have gone by many names. The first known appearance of the knight-rook and knightbishop compounds is in 1617 with the publication of D. Pietro Carrera's Il Gioco delgi Scacchi, which described a variant to be played on a 10×8 board, where they were named the Champion and Centaur respectively. In the 1920s, the Grandmaster José Raúl Capablanca, while he was world champion, proposed his own 10×8 variant using the rook-knight (which he first called a Marshall, then later changed to Chancellor) and the bishop-knight (first called a Chancellor, then changed to Archbishop). His stature helped to popularize them, and variants that add those pieces to the standard array are now commonly referred to as Capablanca variants. Other notable variants in this category include: Grand Chess, a 10×10 variant by Christian Freeling that uses the terms Marshall and Cardinal: Gothic Chess, a 10×8 variant by Ed Trice using the terms Chancellor and Archbishop, which was awarded a U.S. patent in 2002; and Seirawan Chess, a variant on the standard 8×8 board invented in 2007 by Grandmaster Yasser Seirawan and Bruce Harper, using the terms Elephant and Hawk. The game of Janus Chess, a 10×8 variant that counts some Grandmasters among its proponents, also features bishop-knight compounds under the name Janus, but not the rook-knight compound. Fairy chess problemists know these pieces under the names Empress (for the rook-knight) and Princess (for the bishop-knight) by analogy with the Queen, which is itself a compound of rook and bishop. The most common names among variants are Marshall and Chancellor for the rook-knight, and Archbishop and Cardinal for the bishop-knight.

The queen-knight compound has also had many names, including Terror, Omnipotent Queen, and Superqueen, but is best known as the Amazon. It also has a long history. In some parts of Europe in the late middle ages, the Queen was allowed to leap like a knight as well as slide like a rook or bishop; this rule died out in most places as modern chess developed and became standardized, but reportedly was known in Russia as late as 1772. Its first known appearance as a piece distinct from the Queen, and alongside the bishop-knight and rook-knight, is in a game from an 18th century Indian manuscript (though sometimes referred to as "Turkish Great Chess"), where it is called a giraffe. In modern times it is best known from the game Maharajah and the Sepoys, in which white's sole piece is a royal (that is, subject to check and checkmate like a king) amazon pitted against black's orthodox chess army.

The symbols used for these compound pieces among players vary in design (see Tables 1, 2, 3 below), but in general they are transparent combinations of two component symbols, either through

superimposition or fusion of elements. An uncommon but notable exception is the use of a stylized mitre or biretta for the bishop-knight compound in games where it is referred to as an archbishop or cardinal. The use of distinct symbols for these pieces is more common among players of the aforementioned variants than among problem enthusiasts; the latter tend to prefer rotated symbols, though 1Echecs-style "half-symbols" (see below) are occasionally found in the literature.

The popular fairy chess font 1Echecs takes an unusual approach to compound pieces. Instead of dedicated compound symbols, it provides left and right "half-symbols" of some pieces, which can be mixed and matched as needed: the queen and its three rotations  $(\underbrace{\mathbb{Y}}, \underbrace{\mathbb{Y}}, \underbrace{\mathbb{Q}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{A}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{A}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{A}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{S}}, \underbrace{\mathbb{R}}, \underbrace{\mathbb{R$ 

Neutral versions of neither superimposed/fused compound symbols, nor the archbishop mitre, are attested; neutrals built from "half-symbols" are possible but not known to be in use. Unlike the rotated symbols, which can represent a wide variety of pieces, the compound symbols have one-to-one correspondences with specific pieces, which happen to be rarely encountered in neutral form.

**6. Current practice:** Most dedicated chess fonts are currently dingbat fonts placing chess symbols in the Basic Latin and sometimes Latin-1 ranges using a variety of incompatible allocations. Often the orthodox pieces are assigned to letters according to the algebraic notation conventions of the font creator's native language, with other pieces (and sometimes board diagram elements or Informator symbols) assigned more or less arbitrarily to the remaining printing characters. A notable exception is the freeware Quivira font, which is a Unicode font with several heterodox chess symbols assigned to the Private Use Area.

In LaTeX, chess symbols are handled by packages such as Diagram, Chessfss, and Skak. The Diagram package—which, despite its name, handles figurine notation as well as board diagrams—provides a means of specifying "upside-down" (turned 180°), "left" (counter-clockwise 90°), and "right" (clockwise 90°) versions of the standard piece symbols, with "grasshopper" and "nightrider" shorthand forms for the turned queen and knight, and commands for the equihopper and rotated equihopper symbols.

# 7. Unicode Character Properties.

```
1FA00;NEUTRAL CHESS KING;So;0;ON;;;;;N;;;;
...
1FA53;BLACK CHESS KNIGHT-BISHOP;So;0;ON;;;;;N;;;;
```

# 8. Line Breaking

Chess symbols are typically immediately followed by a letter and number to designate a board square in algebraic notation, and sometimes additional letters, punctuation, and symbols. These are treated as units and should not break between the chess symbol and following letter. The default line breaking class for alphabetic and symbol characters would have the correct behaviour.

# 9. Collation

There is no well-established collation order for heterodox chess symbols. While orthodox chess symbols are typically ordered by the traditional point values used for evaluating exchanges, heterodox chess

pieces do not have traditional values and most heterodox chess symbols do not have fixed piece identities. Because it would be preferable to sort heterodox piece symbols directly after the orthodox piece symbols found in the Miscellaneous Symbols block, the additional characters have been added in an order based on {white > black > neutral} runs repeating at 45° rotations. Thus collation would be as follows. Blue characters are in the Miscellaneous Symbols block. Other characters go in code chart order with interpolations shown in red.

# 10. Emoji

None of the already encoded chess piece symbols are currently classified as emoji, and these symbols would likewise not be expected to have emoji behaviour. Even if the orthodox symbols were to become emoji, the same would not necessarily be expected of the heterodox symbols. The rotated symbols are part of an abstract system of notation and do not literally represent chess pieces turned upside down or on their sides. Similarly, the equihoppers do not represent physical pieces that could be rendered as full colour images. The knight-compound symbols do sometimes represent real physical chessmen, but are probably too specialized to be in demand as emoji.

# **11. Vertical Orientation**

All characters proposed here should have a vertical orientation property of U (not rotated in vertical layout), the same as the existing chess symbols, since orientation is semantic.

Herrlicher schwarzer Figurenzyklus und drei Rundläufe des Åh5, mit sparsamsten Mitteln aufs Brett gezaubert. Im zyklischen Wechsel opfern sich Nachtreiter, Turm und Grashüpfer dem Åh5 und der umgewandelten weißen Dame, während Take&Make dafür sorgt, dass er das Umwandlungsfeld erreicht und im Mattzug im neuen Kleid nach h5 zurückkehren kann. Ein perfektes Minimal.

**Figure 2.** Excerpt from the October-December 2012 issue of the Dutch chess problem magazine *Probleemblad*, showing TURNED KNIGHTS (circled in green) and TURNED QUEENS (circled in red), here representing the nightrider and grasshopper, respectively, in figurine notation.

The solver will soon see that the Mao c1 is pinned by the Pao g1, and that moves by the De1 would give check, simultaneously unpinning the Mao (a curious effect that is, of course, quite impossible with orthodox force). The set checks with unpins are: 1...Oxf3+2Oa2; and 1...Oxd3+2Oe2. Why can the mating moves not be played the other way round? With the black knight on f3, 2Oe2? is not mate, because of 2...Od2!, closing the Mao's check-line. Similarly, if the black knight is on d3, 2Oa2? fails to 2...Ob2!.

Figure 3. Excerpt from the book *Chess Wizardry: The New ABC of Chess Problems*, showing the clockwise rotated knight representing a *mǎ* (xiàngqí horse)

**Figure 8.** Section headings from *Fairy chess endings on an n x n chessboard* by Václav Kotěšovec, all using the 1Echecs font's left-half knight and right-half queen/rook/bishop glyphs for the KNIGHT-QUEEN, KNIGHT-ROOK and KNIGHT-BISHOP compounds.

**grasshopper**, a piece invented by DAWSON in 1913 for use in FAIRY PROBLEMS. It may be moved any distance along ranks, files, and diagonals to occupy, or capture on, a square immediately beyond an intervening man of either colour; it may not be moved unless it hops, nor may it hop over more than one man. The most popular of all fairy pieces, the grasshopper is represented by the symbol G or the figurine **m**.

**nightrider**, a LINE-PIECE invented by W. S. Andrews in 1907 and first used in FAIRY PROBLEMS in 1925 by DAWSON, who named it (perhaps after Nightrider Street, adjacent to the place where he attended problemists' meetings). It is represented by the symbol N or by the figurine  $\bigtriangledown$ . (For players N means knight, but problemists use S as a symbol for that piece.) The nightrider can make, in one move, one knight's move or more in a straight line. On an otherwise empty board a nightrider at al could be moved to c2, e3, or g4, or, on another line, to b3, c5 or d7; it can be obstructed only by men on those squares where it touches down on its journey. (Compare ROSE.)

Figure 9. Excerpts from The Oxford Companion to Chess.

Figure 10. Sample problem and solution in figurine algebraic notation from the book *Israeli Chess Problem Art 1932-2010*, with WHITE and BLACK TURNED QUEENS representing grasshoppers

**Figure 11.** Diagrams from the October-December 2012 *Probleemblad*. Different fonts are used for the diagrams and captions, but the symbols retain their identities.

G321. Royal piece (rX): piece that executes a function of the King on the board. Berolina Pawn ▼: moves diagonally, captures straight ahead and promotes normally. Hamster is: moves like the Grasshopper but deflect 180° on passing over the hurdle. Locust i: a piece which moves only to capture. It lands on the same squares as the Grasshopper, but the arrival square must be empty, because the Locust captures its hurdle. I. 1.r <a href="https://www.en.ut.com/lice.com/sub-captures-its-hurdle-lice.com/lice.

#### 1.5.1 Chess pieces within normal text

Sometimes you may need symbols of chess pieces within your normal text, e.g. to show the *Viele-Väter-Stellung* 堂c8, ≜b6, **\***a8, **▲**a7. This is possible by {\wK}c8, {\wB}b6, {\sK}a8, {\sB}a7. Additionally you may use some of these symbols:

- \swL 📓 a white bishop on a black square
- \ssL 🙎 a black bishop on a black square
- \wNr 😳 a white nightrider
- \nNr 🗳 a neutral nightrider
- \sNr 🗳 a black nightrider
- \wGh 🐺 a white grashopper
- \nGh 🗥 a neutral grashopper
- \sGh 📠 a black grashopper
- \Imi an imitator, you may also use the Circle notation:
- \wC a white circle
- \sC a black circle
- \wE ⊨ a white equihopper
- \sE M a black equihopper
- \nE ⊨ a neutral equihopper
- \wX ≚ a white rotated equihopper
- \nX X a neutral rotated equihopper
- **Figure 43.** Commands for turned pieces and equihoppers in figurine notation, using the LaTeX Diagram package. Excerpt from the Diagram manual.

G252. Supercirce (Суперцирце) – узята фігура відроджується на будь-якому вільному полі дошки. При попаданні А на останню лінію він негайно стає фігурою, на першій же лінії А нерухомий і може покинути її при черговому узятті. Nonstop Equihopper ний Рівнострибун) – рівнострибун, руху якого по прямій не можуть завадити розташовані на ній фігури; Neutral Erlking (нейтральний Ерлкінг) – ходить як с, але без виконання королівських функцій; Neutral Empress (нейтральна Цариця) – комбінація + 4.

**Figure 44.** Excerpt from the October 2014 issue of *Problemist of Ukraine (Проблеміст України)*, using the equihopper symbol, NEUTRAL ROOK and KNIGHT, NEUTRAL TURNED BISHOP, and NEUTRAL ROOK ROTATED 90°.

# Cyclic change of 5 mates All defences on same square!

The first realization of such idea.

Figure 56. Solution to a problem from Václav Kotěšovec's Fairy Twomovers 2008-2010 with the BLACK KNIGHT ROTATED 45°..

Figure 57. Solution from the October-December 2013 *Probleemblad*, showing a BLACK CHESS BISHOP ROTATED 270°.

Er waren 82 inzendingen. Bovenaan treffen we een achtvoudige uitwerking aan van de Kroaat Predrag (12) die 10,5 punt waard was: 1. 3 a 4 2. 2 4 4 5 3. 3 b 6 + 2 h 3 4. 3 d 5 + 4 x b 6 #; 1. 2 d 4 4 b 4 2. 2 a 6 b 5 4. 3 c 6 2 2 4. 3 d 5 + 4 x c 6 #. We zien een zwarte Anti-Grimshaw van u en o op b 5, en een witte van s en s op d 5. Erg taskachtig; meestal zijn jury's daar niet zo tuk op maar deze keer klaarblijkelijk wel.

**Figure 58.** Solution from the May 2015 *Problemist of Ukraine*, showing a BLACK CHESS BISHOP ROTATED 270°.

■ 290: I. 1. ీe5 新f5 2. ీ:f5(漸c1) (3:d2(∜g4)#, II. 1. ీe3 (3:e7 2. ) 5(3:b5() a6)#, III. 1. bc3 (3:d2(\$)f5) 2. ) 6 (3:f5(\$)d2)#, IV. 1. (3:c4 ) e7 2. b:c4(\$)b5) (3:e7() f8)#. Štyri riešenia zakončené echovými matmi.

**Figure 59.** An excerpt from the September 2013 issue of the Slovak magazine *Pat a Mat* (*'Stalemate and Checkmate'*), showing solutions to two different problems, one of which uses a NEUTRAL KNIGHT ROTATED 45° and a NEUTRAL KNIGHT ROTATED 225°.

Figure 60. An excerpt from the June 2015 issue of the Slovak magazine *Pat a Mat*, showing the solution to a single problem using both NEUTRAL KNIGHT ROTATED 135° and a NEUTRAL KNIGHT ROTATED 315°

# **Tables**

Table 1: Knight-Bishop compounds and their components in various fonts and symbol sets

![](_page_28_Figure_2.jpeg)

- Notes: 1. The Alfaerie and Motif sets at chessvariants.org are GIF collections based on the Chess Alpha and Chess Motif fonts, respectively, extended with a variety of variant pieces.
  - 2. The Alfaerie set includes mitre-style cardinal symbols as an alternative to the explicitly compound knight-bishop symbols. They are not known to be used contrastively.
  - 3. The Gothic Chess set is used in United States Patent #6,481,716 "Method of playing a variant of chess"

# A. Administrative

#### 1. Title

#### Revised proposal to encode heterodox chess symbols in the UCS

- 2. Requester's name
- **Michael Everson**
- 3. Requester type (Member body/Liaison/Individual contribution)
- Individual contribution.
- 4. Submission date
- 2017-03-28
- 5. Requester's reference (if applicable)
- 6. Choose one of the following: 6a. This is a complete proposal
- Yes.

6b. More information will be provided later No.

# B. Technical -- General

1. Choose one of the following:

1a. This proposal is for a new script (set of characters)

Yes.

# **Chess Symbols.**

#### Proposed name of script

1b. The proposal is for addition of character(s) to an existing block

No.

- 1b. Name of the existing block
- 2. Number of characters in proposal

84.

3. Proposed category (see section II, Character Categories)

# Category A.

4a. Is a repertoire including character names provided?

Yes.

4b. If YES, are the names in accordance with the character naming guidelines in Annex L of ISO/IEC 10646-1: 2000?

Yes.

4c. Are the character shapes attached in a legible form suitable for review?

Yes.

5a. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard? Michael Everson.

5b. If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

#### Michael Everson, Fontographer.

6a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?

No.

6b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? Yes.

7. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?

No.

8. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at http://www.unicode.org for such information on other scripts. Also see Unicode Character Database http://www.unicode.org/Public/UNIDATA/ UnicodeCharacterDatabase.html and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

#### The characters should have the same properties as other symbols.

# C. Technical -- Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.

No.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

#### Yes.

2b. If YES, with whom?

#### World Federation for Chess Composition (WFCC)

2c. If YES, available relevant documents

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

#### Everyone.

4a. The context of use for the proposed characters (type of use; common or rare)

## Common.

4b. Reference

5a. Are the proposed characters in current use by the user community?

#### No.

5b. If YES, where?

6a. After giving due considerations to the principles in Principles and Procedures document (a WG 2 standing document) must the proposed characters be entirely in the BMP?

#### No.

6b. If YES, is a rationale provided?

#### 6c. If YES, reference

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?

8a. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?

#### No.

8b. If YES, is a rationale for its inclusion provided?

8c. If YES, reference

9a. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

## No.

9b. If YES, is a rationale for its inclusion provided?

9c. If YES, reference

10a. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?

#### No.

10b. If YES, is a rationale for its inclusion provided?

10c. If YES, reference

11a. Does the proposal include use of combining characters and/or use of composite sequences (see clauses 4.12 and 4.14 in ISO/IEC 10646-1: 2000)?

# No.

11b. If YES, is a rationale for such use provided?

11c. If YES, reference

12a. Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?

No.

12b. If YES, reference

13a. Does the proposal contain characters with any special properties such as control function or similar semantics?

No.

13b. If YES, describe in detail (include attachment if necessary)

14a. Does the proposal contain any Ideographic compatibility character(s)?

No.

14b. If YES, is the equivalent corresponding unified ideographic character(s) identified?
